## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1, 3-13, 15, 17-19, 27, 41-42, 45, 47-51, 88-90, 93-97 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claims 1, 3-13, 15, 17-19, 27, 41-42, 45, 47-51, 88-90, 93-97 are allowable over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of the said prior art which teaches:

A. A method and an apparatus for transforming source color image data from a source device into destination color image data for rendering by a destination device, wherein a color management module having a source color transform generator is used, comprising the steps of and means for constructing a source color transform based on a source device color characteristic data contained in a source color data file, wherein the source color transform is constructed by using a source color transform generator and wherein the source color transform transforms the source color image data to interim color image data in an interim color space; and applying the constructed source color transform and a destination color transform to the source color image data to transform the source color image data from the source device color space into the destination color image data.

B. A method and an apparatus for transforming source color image data from a source device into destination color image data for rendering by a destination device, wherein a color management module having a source color transform generator is used, comprising steps for or means of obtaining a source color data file corresponding to the source device wherein the

source color data file contains source device color characteristic data, and wherein the source device color characteristic data is formatted according to a standard predetermined format and has a plurality of tags containing the source device color characteristic data and a set of viewing condition data corresponding to a set of viewing conditions; constructing a source color transform based on a source device color characteristic data contained in a source color data file, wherein the source color transform is constructed by using a source color transform generator and wherein the source color transform transforms the source color image data to interim color image data in an interim color space; and incorporating the source color transform in a color transformation sequence to transform the source color image data into the destination color image data .

C. A method and an apparatus for managing color data to transform source color image data into destination color image data for rendering by a destination device, wherein a color management module having a color transform generator, comprising means for or steps of constructing a source color transform based on a source color data file by using the color transform generator; constructing a destination color transform based on a destination color data file by using the color transform generator; constructing a gamut transform based on gamut boundary of the source device and the destination device gamut boundary description; and applying the source color transform, the gamut transform and the destination color transform to the color image data.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
